

Green Waste Recycling

How we care

As the cost of green waste to landfill increases Nurture can provide alternatives. Instead of collecting grass cuttings we can use mowers with mulching decks.

Nurture can supply worm digesters that not only compost green waste, but can also compost kitchen waste. Nurture then use the compost with their office planters.

The green waste from gardening contracts within the M25 are composted at Nurtures yard and then reused to mulch borders in February.

Nurtures tree surgeons return the chippings to the nursery which are taken to Slough power station.
